

CASE STUDY

GMetriXR

About - GMetri¹

GMetri is a no-code metaverse solution with creation, publishing and analytics toolkits focused on upgrading the web 2.0 to 3.0, upgrading web-pages to web-experiences.

The metaverse is the future of the internet – the Web3.0, and GMetriXR is the wordpress of the metaverse.

Anyone can simply create these web 3.0 experiences with the no-code authoring toolkit, and track performance with leader boards and analytics.

Experience and benefits received after migrating to NxtGen

- The services provided by NxtGen have been cost effective compared to other cloud providers. NxtGen datacenter racks enjoy dual power source and a carrier neutral internet connectivity. Internet is connected with 7 ISPs on a ring topology and all the service providers are connected on auto failover mode through BGP (BORDER GATEWAY PROTOCOL). GMetri's intracompany services rely heavily on NxtGen. It was an easy migration, providing us the benefit of lower latency and zero downtime.
- NxtGen's multi-tasking team is efficient and prompt with their deliverables. Their server and connectivity setup went smoothly within a short period of time.

Testimonial

GMetri has had an exceptional experience working with NxtGen for the past year. The dedicated attention provided by Sales Team has been really helpful - they follow up with us at regular intervals and visits us in person to ensure we are satisfied. We've experienced efficient, quick and prompt response from NxtGen's management, which helped us solve issues quickly and without hindrance. It is noteworthy that NxtGen's strategies and processes are outlined clearly and systematic.

We are pleased to be associated with NxtGen, and it has been an absolute pleasure working with the entire NxtGen team.
